

High accuracy electric muffle furnace **SNOL 13/1100 LED** is designed for combustion loss determination with the assistance of added balances, which weigh the materials before, during, and after the process. This could also inform about the completion of the process – as soon as the weight ceases to decrease. To eliminate gases or smoke that are released during thermal processing, an exhaust system may be installed additionally. It is used with a variety of materials like, for example, sediment, sludge, soil, waste, or inorganic materials such as cement, lime, calcinated bauxite, and refractories, firing up to 1100°C. The furnace is an excellent fit for scientific laboratories, educational institutions, ceramic studios and is used in medicine and industry.
