Gloves®**
TEMPSHIELD

TEMPSHIELD®

CRYO-PROTECTION®

The TEMPShield® Story

Tempshield® was established at a kitchen table in 1980. The founders' goal was to create a much-needed product that would protect the hands from dangerous burns that could be caused by liquid nitrogen and other cryogenics. Their tireless dedication drove them to develop a superior glove, by testing and retesting different materials and features that would maximize cold and splash protection, as well as to ensure dexterity and durability. The exceptional quality of Tempshield's Cryo-Gloves® was well received, and the business grew quickly. Operations were moved from the founders' home to an ISO-approved facility outside of Bar Harbor, Maine, the gateway to Acadia National Park. In the years since then, aprons, face shields, and gaiters have been added, providing safety from head to toe.

The rigorous process of making the best cryogenic gloves begins with multiple inspections of the raw materials. This assures the elimination of imperfections that could allow cryogenic fluids to penetrate. After the fabric is cut by hand, the multiple layers are assembled by skilled craftspeople with an average of 15 years of experience. Finally, each glove is individually inspected, a hand-crafted masterpiece. The highest standard for materials and workmanship is central to Tempshield because our mission is to keep our customers safe.

Tempshield Cryo-Protection® products are certified by United States and international testing agencies to meet stringent governmental requirements for safe cryogenic handling. No other manufacturer subjects their gloves to such rigorous conditions, because our #1 concern is for your protection. Everything, from the careful selection of materials to the meticulous sewing and inspection, is done to allow for safe and comfortable use in hazardous environments at ultra-low temperatures.

Features

- Cryogenic protection for ultra-cold applications down to -196°C (-320°F)
- State-of-the art materials and a multi-layered construction allow for a maximum level of thermal protection, flexibility, and dexterity which are essential features when function is important and safety is critical
- High performance, thermal inner lining wicks moisture away from your hands, maintaining comfort over extended periods
- Safety certified to meet EU standards: EN 511, EN 388, EN 420
- **Applications:** handling dry ice, low and ultra-low temperature freezers, closed cryogenic systems

Cryo-Protection® Face Shield

Splash Protection When Using Cryogenic Liquids

- The injection molded polycarbonate clear shield is shaped to hug your chest and side of your face when in use, and pivots up and out of the way when your task is done
- The padded headgear has a ratchet band in the back and a pin-and-lock system over the top for a 2-way adjustable fit.
- A lightweight design meets ANSI Z87.1 requirements, is CE-Marked, and is impact resistant
- Rigorous testing has confirmed that the shield retains its optical clarity and impact resistance after being splashed with liquid cryogenics
- The head gear also withstands cryogenic splashes

CAUTION Not for immersion in liquid cryogenics

Certified Safe

To ensure Tempshield’s high standard for quality, we monitor production using our comprehensive ISO 9001: 2015 certified quality system, monitoring every phase of production from product development to distribution. Each item undergoes a rigorous series of inspections promising the best thermal protection available.

Nothing is more important to the people at Tempshield than your safety.

Tempshield specializes in the development and manufacturing of high-quality, cryogenic personal protective equipment and apparel. Made from the highest-quality state-of-the-art materials, our gloves allow for a maximum level of thermal protection, flexibility, and dexterity.

Today, our cryogenic gloves, aprons, gaiters and face shields are essential accessories for those working in hazardous environments at ultra-low temperatures. The leading medical, scientific, and aerospace firms worldwide rely upon Tempshield products to keep them safe.

EN 511

EN 388

EN ISO 21420
EN ISO 13688

- Convective cold
 - Contact cold
 - Water impermeability
 - Extreme cold flexibility
- Abrasion resistance
 - Blade cut (coupe test)
 - Tear resistance
 - Puncture resistance
- pH
 - Innocuousness
 - Dexterity

Warning

Anyone handling cryogenic liquids should be familiar with hazards presented by such materials and trained in how to handle them safely. Emergency procedures should be established and rehearsed, proper training in the operation of all equipment provided, and knowledge and appreciation of hazardous properties of the materials instilled. Cryogenic liquids should never be handled without proper protective gear.

Glove Fitting Guide

- Choosing the correct glove fit is essential to your safety and comfort
- The glove must be loose enough to shake off your hand in one motion, in the event of saturation with cryogenic fluid
- Too tight a fit leads to thermal loss
- Tempshield’s gloves are sized appropriately to take quick removal into account - order your true size
- If your length and width sizes do not match, order to your width size - the cuff will cover any additional length needed

Here’s how to measure your hand:

For your hand length, measure from the fold of your wrist to the tip of your middle finger.

For your hand width, make a fist with your dominant hand and measure the circumference below your knuckles. Do not include your thumb.

TEMPSHIELD SIZE (US)	HAND LENGTH (in inches)	HAND WIDTH (In Inches)
S	6 ¾	7-8
M	7 ¾	8-9
L	7 9/16	9-10
XL	8 1/16	10-11
XXL	8 1/16	11-12

TEMPSHIELD SIZE (EU)	HAND LENGTH (in Millimeters)	HAND WIDTH (In Millimeters)
8	171	178-202
9	182	203-228
10	192	229-253
11	204	254-278
12	204	279-304

Cryogenic Safety

Anyone handling cryogenic liquids should be familiar with the hazards presented by such materials and trained in how to handle them safely. Emergency procedures should be established and rehearsed, proper training in the operation of all equipment provided and knowledge and appreciation of hazardous properties of the materials instilled. Cryogenic liquids should never be handled without proper protective gear.

- Generally recommended protective apparel for handling cryogenic liquids include the following:
- Proper fitting gloves *
- Protective face shield and goggles
- Protective apron without pockets
- Protective gaiters
- Pants without cuffs
- Shoes without laces

***Proper Fitting Gloves** For maximum dexterity and safety, cryogenic gloves must fit properly. Although gloves should be loose enough to allow for quick removal if necessary, a glove that is too large impairs dexterity and function. A tight glove leads to thermal loss.
